**Fire Department Daily Briefing
March 18th, 2020 at 1456 hours**

Summary:

This report is being generated and filed as a daily report of status and activity that summarizes roughly the previous 24-hours of Fire Department-related operations.

Personnel:

No Fire Department personnel have reported any illness or potential exposure to COVID-19 in the past 24-hour period to Department Management.

Incidents:

The Fire Department has not responded to any emergency incidents involving confirmed or suspected cases of COVID-19 in the past 24-hour period.

Operations:

All emergency and critical services are in full operation. All non-emergency and non-essential services have been suspended until further notice.

Facilities:

All facilities are operating at normal status.

Apparatus:

All apparatus are operating at normal status.

Interagency Contacts:

Two (2) short videos from the CDC were forwarded to Ms. Neva Jenkins to post on the Village website and Village Facebook page to continue to keep the public informed.

Coronavirus (COVID-19) Statistics:

Worldwide Perspective:	Total Confirmed Cases	207,518	(+12,645)
	Total Confirmed Recoveries	82,104	(+1,264)
	Total Confirmed Deaths	8,248	(+384)
Nationwide Perspective:	Total Active Cases	7,127	(+1,425)
	Total Confirmed Recoveries	17	(+/-)
	Total Confirmed Deaths	115	(+21)
Statewide Perspective:	Total Confirmed Cases	160	(+54)
	Total Confirmed Recoveries	2	(+/-)
	Total Confirmed Deaths	1	(+1)

The following page contains a state by state breakdown of case reports. The State of Illinois is further detailed to show case reports per county. This information will be tracked daily for at least the rest of March 2020 to determine if isolation and closure mandates slowed viral rate of spread.

State	Active Cases	Confirmed Deaths	Confirmed Recoveries
Alabama	39	0	0
Alaska	6	0	0
Arizona	21	0	1
Arkansas	22	0	0
California	705	13	6
Colorado	182	2	0
Connecticut	68	0	0
Delaware	16	0	0
Florida	210	7	0
Georgia	146	1	0
Hawaii	14	0	0
Idaho	9	0	0

Remarks:

The Illinois Department of Public Health did confirm that the first virus-related death in Illinois occurred yesterday in Cook County. This person was reported to be a female in her 60s with underlying medical issues that were unfortunately exasperated by the introduction of a new virus.

Total active cases in the United States did increase. Of the active cases reported, nearly 65% of these cases are located in just 5 States (New York, Washington, California, New Jersey, and Louisiana). It is not known if all of these States have implemented the same practices as Illinois has.

Total deaths in the United States increased as well. Again, nearly 83% of deaths are contained to many of the same States that have the highest number of active cases. The majority of the virus-related deaths have occurred in Washington, New York, California, Florida, and Louisiana.

The trend continues to be that most people that contract the virus exhibit mild to no symptoms, which means that they may not even know they are a carrier of the virus. Person A may have the virus and feel no effects, but Person A may spread the virus to Person B who could end up becoming sick or ill.

Active cases in Illinois increased, but so did the number of people that were tested. We want to see the number of tests go up so that those that are sick can be identified and handled. Negative test results continue to outpace positive test results which is also positive information.

In terms of social distancing, restrictions, school closings, and so forth, one metric we have to determine effectiveness is daily call volume. Over the past two days, Fire Department call volume has been down almost 50%, which would suggest that people are staying home as instructed.

State of Illinois Case Analysis:

	03/17/20	03/18/20	03/19/20	03/20/20	03/21/20	03/22/20	03/23/20
